

Engineer Handover Sheet

Project: Fully underground civil shelter, private plot, Rusanivski Sady, Kyiv Handover date: 13.09.2026
Handed over by: Client / client's representative
Handed over to: _____ (licensed structural engineer, name & registration no.)

1. Purpose of this handover

This sheet accompanies the documents listed below when the project is handed to a licensed structural engineer for the actual design. It exists so the engineer starts from a clear, honest baseline: nothing enclosed is a design. It is a concept brief plus a list of what is still missing.

2. What is enclosed

Item	Document	Status
1	RECLASSIFICATION_NOTICE.md	Explains why the earlier PDF/XLSX package is not usable as design data
2	01_Design_Basis_and_Open_Issues_Register_Rev01.md	Controlling register — design basis + blocking open issues (OI-01...OI-08)
3	03_Geotechnical_Investigation_Brief.md	Scope brief to commission a geotechnical investigation
4	04_Supplier_Data_Request_Package.md	RFI templates sent (or to be sent) to door/hatch/ventilation/concrete suppliers
5	05_Site_Topographic_Survey_Brief.md	Scope brief to commission a topographic/site survey
6	ukryttya_3x4_KZh_draft.pdf, ukryttya_3x4_full_estimate_2026.xlsx, png/, svg/	Reference concept only. Illustrates the client's intent (room layout, approximate size, general arrangement). Not for design, procurement, or construction — see item 1.

3. What is explicitly NOT enclosed (and must not be assumed)

- A geotechnical report (not yet commissioned — see item 3 above)
- A topographic/site survey (not yet commissioned — see item 5 above)
- Any structural calculation (walls, slabs, uplift/UPL, lateral earth pressure)
- An assigned civil-defense protection class
- Confirmed supplier data for doors, emergency hatch, ventilation, or concrete mix
- Any reinforcement, concrete quantity, or budget figure that may be relied upon

4. What is requested from the engineer

- 1 Review the Design Basis & Open Issues Register (Doc.01) and confirm, add to, or revise the open issues as you see fit — this register is a starting point, not a constraint on your professional judgment.

- 2 Advise the client on which investigations/surveys must be commissioned before you can begin calculations (Docs. 03 and 05 are drafted for this purpose but should be reviewed/amended by you or a suitably qualified geotechnical/survey professional before being issued).
- 3 Determine the applicable civil-defense protection class and the code editions in force, and record both in the register.
- 4 Once OI-01...OI-08 (or your revised list) are closed, produce the structural calculation package and issued-for-construction (IFC) drawings under your own seal/registration.

5. Client contact and site information

Field	Value
Site address	Kyiv, Rusanivski Sady (private plot) — exact cadastral reference to be provided by client
Client contact	_____
Intended occupancy	4 persons
Access constraints for site visit / drilling rig	To be confirmed by client

6. Sign-off

Role	Name	Signature	Date
Client / representative (handing over)			
Licensed structural engineer (receiving)
